Date Code Policy

Marki Microwave's standard date code policy is to ship products with an assembly date code of 5 years or less. Marki Microwave's product warranty period begins the date of shipment.

Component shelf life is essentially unlimited (with the exception of moisture sensitive components which are shipped with special labeling and packaging) and component age does not adversely affect performance to product specifications. Product inventoried by Marki Microwave using industry guidelines for packing and handling is guaranteed to meet the Marki Microwave electrical and mechanical specifications regardless of the date code on the material at the time of shipment.

Moisture Sensitive Components:

The JEDEC industry standard J-STD-020 defines a set of Moisture Sensitivity Level (MSL) ratings used to identify package sensitivity to moisture. The JEDEC industry standard J-STD-033 for moisture management provides a uniform method to ensure devices are protected during handling, packing, shipment, storage, and use.

Specific handling, dry packing and exposure limits are established for each MSL rating to ensure no manufacturing issues are experienced at the board assembly process.

Marki Microwave adheres to these industry standards for packaging of all our devices.

Warranty:

All product shipped by Marki Microwave is guaranteed to meet published datasheet specifications and industry standard solderability requirements. A Certificate of Compliance (CoC) statement is printed on the packing slip with each shipment.

Marki Microwave's standard warranty applies to all product shipped regardless of the date code on the material at the time of shipment.
